MTI - Core Partners System - One Page Summary for Programmer

Version 4.0 - 2026-11-06 - Owner: MTI - Farag Ali - Source of truth: MTI_Core_Partners_System_v4_Final.json - Read that file first. This page is only the start.

1. WHAT TO BUILD

A background system inside the MTI platform core, driven by the Personal Assistant. The Assistant is the single entry point. It reads the code, shows the identity card, asks for the password, opens the work hub, routes tasks, sends notifications, records every step. It never gives a legal opinion. It never gives an accounting opinion.

2. ENTRY FLOW - CODE DECIDES PATH

1) Person opens Personal Assistant. 2) Assistant asks for code, or guest with no code. 3) Assistant validates code. 4) Assistant shows Identity Card. 5) Assistant asks for password. 6) Assistant opens Work Hub. 7) Person continues from where that person wants. One session = one code + one path. To change role, close session and enter again with the other code.

Code	Who	Path
No code	First-time client	Guest graphic landing
MTI-DEAL-2026-001	Returning client	Client path
MTI-LEGAL-001	Fintech Lawyer	Legal path
MTI-ACCT-001	Accountant	Accounting path
MTI-AUDIT-001	Auditor - separate	Audit path
MTI-OWNER-001	MTI Owner	Owner path

3. IDENTITY CARD + PASSWORD + WORK HUB

Identity Card after code, before password: full name, company / institution, official entity (Customs / Taxes / Bank / FRA / other), role, code, path, member since, status. **Password:** created by the person, exactly 8 chars, medium: letter + number + symbol. First-time: create + confirm + live checklist + strength meter. Returning: enter + show/hide + forgot via owner code. After 3 wrong tries, session locked. **Work Hub:** 7 cards - View, Update my data, New deal, Follow my works, My accounts, My documents, Notifications.

4. FIRST-TIME GUEST - B2B / B2C / C2C + MEMBERSHIP

Guest landing: graphic banner + promo cards (Ceramic, Tomato Paste, T-Shirt). **B2B** company to company - needs: commercial register, tax card, bank letter, company profile - path: company file, deals, contracts, Escrow. **B2C** company to customer - needs: company data, catalog, price list, delivery info - path: product page, orders, follow up. **C2C** person to person - needs: national ID, phone, email, personal profile - path: personal file, small deals, documents. **Membership:** data form, documents checklist, core issues MTI-DEAL-2026-00X, membership card, create password, membership approved, entry with new code.

5. COMMISSION BASE - READ CAREFULLY

Each partner = 3% x total_deal_commissions_collected. Core total = 6%. MTI retained = 94% before operating costs. Base = total MTI deal commissions actually collected from deal contracts only, before any deduction. **Excluded:** subscriptions, total income, net profit, any income that is not a deal commission. **Example:** deal commissions collected 20,000 + subscriptions 2,000 NOT included = partner 600, not 660. No partner is paid before actual collection.

6. PARTNERS, NOTIFICATIONS, LOG, DATA MODEL

Legal: all legal affairs, contracts, CBE / FRA, disputes, data policy. **Accounting:** all accounting A to Z, electronic ledger, bank + Escrow, reconciliation, salaries, subscriptions, budgets + statements. **Audit:** separate code, audit only, cannot post daily entries. **Notifications:** sender Personal Assistant, bell + unread count, filter All / Unread / Read, auto on task approval, code issue / revoke, deal close, file decision + manual send by owner. **Full log:** every action - entry, password, file, task, code, notification, deal, update - with time, identity, code, action, path, result + filters + CSV preview. **Data model:** session, code, identity, membership, task, partner_opinion, commission_record, ledger_entry, notification, activity_log. **Account settings:** update company + official entity + phone + email, change password, deactivate account. **Owner dashboard:** summary cards, all paths table, alerts, code management, reports, full log, final review, core.

Acceptance: Code entry works. Identity card shows full identity. Password 8 chars works. Work hub opens. B2B / B2C / C2C membership works. Notifications work. Commission uses total deal commissions collected only. No partner paid before collection. Every task has a written, stamped record. Each identity sees only what belongs to that identity. Every code use is logged.
